# SAP Online Help

## THIS WEEK'S ANNOUNCEMENTS

### Are You Running the Correct Version of IE4.0?

This Web site is designed for use with Microsoft's browser, Internet Explorer 4.0. IE4.0 just happens to be the firm's standard browser, but just having IE4.0 installed on your machine is not enough. In order to use all of the advanced features of this site, you need to make sure that you have ran the update to IE4.0, known as a *Service Pack*. If you try to use a portion of this site and it fails to run correctly, then this is a clue that you may need to run the IE4.0 *Service Pack*. [Need instructions?](#)

## SLIDESHOW PRESENTATION

If you have MS PowerPoint installed on your computer, then you can use the icon below to launch a presentation, providing an overview of SAP R/3, including background information and data on vendors, modules, workflow processing, and so on.

### Navigation Instructions

Once the show starts, you can advance through it in one of two ways: simply click the screen with your "LEFT" mouse button or click on the navigation bar, located on the right side of the screen.

Click the icon to the left to launch the show.
